**Elfiq Networks Announces Buyback Program for
Alteon Application Switches from Nortel Networks**

*Leader in Bandwidth Management and Business Continuity Offers Bridge
to Customers Impacted by Nortel Bankruptcy Filing*

Montreal, Canada (February 4th, 2009) — Elfiq Networks, the manufacturer of the most innovative Link Balancer products today, announced a comprehensive program to help owners of Alteon application switches from Nortel Networks affected by the recently filed bankruptcy documents. The program offers discounts towards the purchase of Elfiq products and services to facilitate a migration to Elfiq Networks' innovative solutions.

“Elfiq Link Balancers will give data centers the key bandwidth management tools they need to ensure maximum uptime and prevent network-based disruptions,” said Jean Pascal Hebert, Vice President of Business Development at Elfiq Networks, a leader in bandwidth management and network availability solutions. “Our proven approach provides a simpler, more cost-effective way of proactively handling the required bandwidth for key applications and services. Elfiq’s products do not require BGP to achieve high levels of continuity, removing complexity and chances for error.”

Elfiq Networks' Link Balancers offer a unique approach to managing bandwidth through a Layer-2 approach, removing complexity in deployment and management. Combined with [Elfiq's Geolink geographical balancing technology](#), data centers have the ability to operate under 24/7 guidelines, preventing any costly unplanned downtime.
