Elfiq Networks Honored with Multiple OCTAS Award Nominations

Link balancer leader among small group of honorees with two or more nominations

Montreal, Canada (April 14th, 2009) — Elfiq Networks, the manufacturer of the most innovative Link Balancer solutions in the market today, has been nominated in two categories of the 2009 OCTAS Awards from Réseau Action TI, the Quebec IT Professional's Association. Nominations include Technology Innovation for its SitePathMTPX technology as well as Commercial Success recognizing the company's outstanding growth over the last 24 months.

"Elfiq is honored to receive these two nominations for the OCTAS Awards, this validates our technology value by providing innovating solutions to real business problems," said Jean Pascal Hebert, Vice President of Business Development at Elfiq Networks. "Being selected in such prominent categories is a great achievement for Elfiq as we continue to enhance our worldwide presence with customers and partners."

SitePathMTPX technology enables organizations to benefit from bandwidth virtualization between two sites, through the bonding of multiple ISP links to achieve greater throughput and performance, which could not be achieved through other methods.

Elfiq Networks is rapidly becoming the leader in bandwidth management and ISP link balancing by developing a global network of reseller partners along with providing key solutions to organizations in 48 countries worldwide.

Elfiq Networks' Link Balancers enable organizations to utilize multiple concurrent ISP circuits to prevent Internet connectivity downtime and improve overall access performance. With more Internet-based applications and services being used in organizations every day, proper access to the Internet has become a critical asset to normal business operations where loss of connectivity or ISP link saturation can result in lost revenue.
