Elfiq Networks Releases New Elfiq Operating System with Advanced Configuration Features and Management

Elfiq Operating System 3.4 includes key new features such as Intelligent Condition Verificator and Time of Day to deliver highly optimized solutions for each individual customer

Montreal, Canada (September 2, 2009) — Today's technology context requires the ability to deliver solutions customized to each customer's requirements as every organization has its own distinct challenges. Elfiq Networks has made a key upgrade to its award-winning Link Balancer solution to meet and exceed complex requirements through the Intelligent Condition Verificator and the Time of Day configuration manager.

"Complex bandwidth solutions are becoming more frequent as organizations move more services towards IP communications like VoIP," said Jean Pascal Hebert, Vice President of Business Development at Elfiq Networks, a leader in bandwidth management and network availability solutions. "Elfiq's Intelligent Condition Verificator and Time of Day features do exactly that, providing customers with the ability to have highly customized scenarios with "what if" scenarios and change them based on current time, providing greater ROI and enabling cost control over pay-per-use ISP links."

Elfiq Networks' innovative Intelligent Condition Verificator feature provides the ability to handle complex scenarios based on user-defined conditions such as modifying traffic segmentation and QoS rules based on link availability and/or saturation, as well as link selection based on usage to provide cost-based link balancing.

The new Time of Day feature enables dynamic adaptation of configurations using time-based conditions so bandwidth can be proactively allocated to the users and applications that benefit the most at a certain moment. With Time of Day conditions, organizations can make the most of available bandwidth.

Other improvements in Elfiq Operating System 3.4 include SNMP enhanced support for management and reporting as well as next-generation Web-based management which provides enhanced configuration management as well as extensive reporting.

"We chose Elfiq after an extensive investigation of similar products. Elfiq offered by far the most comprehensive feature set and the best support at an unbeatable price. The product has been performing better than we might have expected and is now a critical part of our infrastructure. Our sincere thanks to the Elfiq team for their great support." - Andy Reid, IT Manager, St Paul's School, UK

Elfiq's Link Balancers are the only products recognized by Citrix for their added value and complementary approach, as they are the only products iReady certified in this market segment.

Elfiq's agile solutions have been featured in both e-Week and Network World, and two Elfiq products, the LB1500E and LB-4000, have been named Product of the Week by Processor magazine.
