Elfiq Networks joins Citrix Alliance Partner Program

Montreal, Canada; Elfiq Networks is proud to announce that it has joined the Citrix Partner Alliance Program as a Technology Partner. This will enable Elfiq to better assist organizations utilizing Citrix technologies to ensure businesses continuity and better serve their customers.

"We are thrilled to join the Citrix Partner Alliance Program in which our technologies are complementary to almost all the key Citrix solutions. This is a great endorsement for the Elfiq product line and technologies," said Jean Pascal Hebert, Vice-President Business Development of Elfiq Networks. "With Elfiq products, users of Citrix solutions will have a new level of uptime by enabling multi-homed networks with multiple ISP or WAN links to easily ensure the uptime of their investments."

For key products and technologies like WANScaler, Presentation Server, Secure Access Gateway and Application Firewall, which depend on Internet availability, Elfiq can enable the connectivity foundation which will bring an organization's uptime to within the 99.999% range in a very cost-effective fashion. Elfiq's products will also enable the seamless addition of incremental bandwidth as needs grow.

Geolink geographic balancing and SitePathMTPX will complement the Citrix projects by enabling a new level of uptime, availability and disaster recovery for multi-site deployments.

Elfiq Link Load Balancer installation is the simplest on the market. No IP address migration or any change to the firewalls/routers is required. The Elfiq Link Load Balancer guarantees optimal access to your network and applications for business continuity, while optimizing your multi-homed network throughput. Advanced functions like geographic load balancing and VPN multiplexing make it a key element of disaster recovery projects and ensure optimal access to the enterprise's IP services.
