Elfiq Networks Launches New LB-5000E Appliance

New flagship model can handle up to 3.3Gbps, making it an industry pioneer

Montreal (Canada), September 13, 2011– Elfiq Networks has announced the release of the company’s new flagship model, the LB-5000E, designed for enterprise and high-demand environments.

The Elfiq LB-5000E Link Balancer delivers up to 3.3Gbps throughput performance through the use of 10Gbps interfaces. With this enhanced capacity, organizations can build next-generation datacenters and deliver enhanced application benefits to customers and employees alike.

“The Elfiq LB-5000E Link Balancer represents a major performance upgrade for the industry,” said JP Hebert, Vice President of Business Development at Elfiq Networks. “This new model addresses a real need in the industry with its amazing throughput; we even sold units before releasing the product to market. Organizations with growing bandwidth demands will get a ROI in a very short time with this unit.”

The new Elfiq LB-5000E designed for the enterprise space will support up to 3.3Gbps throughput, up to 320 carrier links (ISPs), 3G mobile connectivity and 512 sites for VPN multiplexing with Elfiq’s SitePathMTPX technology, and may run up to five virtual balancers within a single unit. The LB-5000E also supports Elfiq’s innovative Geolink option, designed to redirect inbound and/or outbound traffic to multiple physical sites for business continuity and disaster recovery projects.

“Elfiq Networks is a key partner for Victrix, and this new model will greatly help our customers”, said Marc-André Poulin, founder and chairman of the board at Victrix, an Elite Elfiq Partner. “We have received inquiries from our larger customers who are looking to deploy projects using more than 1Gbps of total throughput, and this product is being very well received.”

Elfiq Networks' link balancers enable organizations to utilize multiple concurrent ISP circuits to prevent Internet connectivity downtime and improve overall access performance. With more Internet-based applications and services being used in organizations every day, proper access to the Internet has become a critical asset for normal business operations, where loss of connectivity or ISP link saturation can result in lost revenue.

About Elfiq Networks

Elfiq Networks (Elfiq Inc.) is a leader in the development of innovative telecommunications and security solutions used in over 110 countries. Aware of today's economic stakes, Elfiq provides leading-edge business continuity and bandwidth management products to businesses in every sector, making IP communications reliable, resilient and operating at optimal performance. Elfiq is a privately owned company headquartered in Montreal, Canada. For more information, visit www.elfiq.com.
