## **Elfiq Networks Releases Mobile Site Manager iPhone Application**

Elfiq Networks releases first ever  
iOS-based Link Balancer management tool to market

**Montreal (Canada), September 13, 2011**– Elfiq Networks released today the new Elfiq Mobile Site Manager tool for remotely managing Elfiq Link Balancer appliances on the Apple iOS platform for iPhone, iPad and iPod Touch. This new mobile application is the first of its kind in the Link Balancer product category and is free of charge to Elfiq customers and partners.

“The new iOS-based application brings a new level of remote management to Elfiq’s award-winning products,” said JP Hebert, Vice President of Business Development at Elfiq Networks. “The Elfiq Mobile Site Manager is free of charge and will greatly help network managers get the most out of their deployments while on the go.”

The Elfiq Mobile Site Manager is available today from the Apple iTunes App Store free of charge. With this application, network managers will be able to remotely connect to their Elfiq Link Balancers and have instant access to their networks’ status and statistics directly from their Apple iOS-based mobile device. Users of other smartphones such as Android-based and Blackberry devices can also access the mobile interface directly from their mobile browser.

Elfiq Networks’ link balancers enable organizations to utilize multiple concurrent ISP circuits to prevent Internet connectivity downtime and improve overall access performance. With more Internet-based applications and services being used in organizations every day, proper access to the Internet has become a critical asset for normal business operations, where loss of connectivity or ISP link saturation can result in lost revenue.
